

Vunique Vacations – Professional Linen Program

The information provided is a basic overview of our professional linen program. To ensure we are able to maintain quality linen practices, our standard time frame from collection (after guest departure) to washing the dirty linens is less than 24hrs. We are currently using the OZONE system for our Professional Linen Program. The OZONE system provides 100% sanitization of all linens. Please find more information about the OZONE system on the brochure attached (AFL-Series Brochure).

Washing Machines with OZONE System

Pictures above are from the commercial laundry facility that we have partnered with. They utilize industry leading equipment like Centennial Washers and Dryers, and they incorporate the OZONE system in their washing machines, which provides 100% sanitization of all linens.

We are able to launder over 500 pounds of linen every hour at this facility, and we are always working to increase this capacity.

These laundry carts have a capacity of 1,000lbs per cart. These carts are used to sort the incoming dirty linens and then sanitized after each used.

DRYERS

Our dryers are able to launder over 600 pounds of linen ever 30 minutes.
